(NY Port Authority Site)

Golden Gate Bridge  
1937  
4200 feet [1280 m]

# Suspension Bridge Statics and understanding tall towers

# Load Path

All forces or loads must eventually get to the ground.  
Can we trace the path of tension or compression?

# Free Body Diagrams

A sketch of all or part of a structure, detached from its support

# Notation

# Equilibrium

$$\Sigma M_A = 0$$

# Equilibrium

$$\Sigma M_A = 0, \quad Hd - wL^2/8 = 0, \quad H = wL^2/8d$$

# Cable tension

$$H = wL^2/8d$$

w = load

L = size

R = form

H = function

$$R = L/d$$

$$H = wLR/8$$

R, L transform w into H

$$R = 10, H = 2 \times 10^5$$

$$R = 6, H = 1.3 \times 10^5$$

Tension

Compression

*returning to NYC mid twentieth century and  
the work of Amman (and Steinman)*
